LeetCode • GeeksforGeeks

PROFESSIONAL SUMMARY

Highly analytical Computer Science undergraduate with a strong foundation in software engineering and **840+ verified DSA solutions** across LeetCode and GeeksforGeeks. Proven expertise in building scalable web applications using the **MERN stack** and implementing advanced NLP workflows. Adept at fine-tuning transformer models, developing robust REST APIs, and leading technical teams. Seeking a Software Engineering role to solve complex computational problems and deliver high-impact production software.

EDUCATION

B.Tech in Computer Science Engineering 2023 – 2027
Sri Vasavi Engineering College, Tadepalligudem
CGPA: **8.8 / 10.0** | **Academic Rank: Top 3 in Semester 4**

TECHNICAL SKILLS

Programming Languages	Java, C, Python, SQL
Web Development	React.js, Node.js, Express.js, HTML5, CSS3
Machine Learning & AI	Sentiment Analysis, FinBERT, Transformers, Recommendation Systems
Databases	MySQL, MongoDB
Tools & Operating Systems	Git, GitHub, Vercel, Linux, Windows
Core Computer Science	Data Structures & Algorithms, Object-Oriented Programming (OOP), Code Optimization

PROJECTS

Financial News Sentiment Analysis 2026 – Present
FinBERT, Loughran-McDonald Lexicon, Python, HuggingFace Transformers, Git [GitHub]

- Engineered a contextual financial sentiment classification engine using pre-trained HuggingFace transformer models, achieving a market prediction classification accuracy of 92%.
- Integrated the specialized Loughran-McDonald financial lexicon by mapping domain-specific terminology, reducing out-of-vocabulary phrasing misclassifications by 14%.
- Designed a custom time-aware sentiment decay algorithm through temporal weight tuning to prioritize real-time financial market signals over stale historic data points.

Movie Recommendation & Discovery Platform 2025
Python, React.js, Express.js, MongoDB, TMDb API, Vercel [GitHub] [Live Demo]

- Architected a full-stack content-based filtering recommendation engine using vector-mapped similarities to process and filter a local dataset of 5,000+ movie titles.
- Leveraged the third-party TMDb (The Movie Database) API by building asynchronous fetching routines to dynamically populate real-time movie posters, metadata, and cast details.
- Developed an asynchronous React.js user interface utilizing dynamic state hooks to deliver real-time, low-latency multi-genre catalog filtering for active users.
- Implemented a decoupled Express.js REST API layer by standardizing routing logic to securely bridge data communication between the frontend client and the database stores.
- Deployed the production-ready system via automated Vercel CI/CD pipelines, ensuring rapid version control updates and maintaining continuous system uptime.

COMPETITIVE PROGRAMMING & PROBLEM SOLVING

GeeksforGeeks	Solved 532+ data structures and algorithmic challenges ; maintain active daily coding streaks.
LeetCode	Solved 312+ problems covering advanced Arrays, Trees, and Sliding Window algorithms.

CERTIFICATIONS

- Oracle Certified Associate** – MySQL Implementation Professional
- HackerRank Certified** – Java (Basic Standard)

LEADERSHIP & ACTIVITIES

- Tech Co-Lead** – GeeksforGeeks Student Chapter; organized 4+ college-wide competitive coding contests and hands-on workshops attracting over 150+ student participants.
- Active Peer Mentor** – Conducted informal group problem-solving sessions focusing on algorithm analysis and complex data structure optimizations.

LANGUAGES

English (Professional), Telugu (Native)
